The Dashboard: Your Central Hub

Upon logging in, you'll be greeted by the Xactimate X1 dashboard. This is your command center, providing quick access to your projects, recent activity, and important updates. Familiarize yourself with the navigation pane on the left, which houses key modules like Projects, Price Lists, Reports, and Admin. Understanding where to find these essential sections is the first step towards efficient workflow management. Think of it as the lobby of your estimation office - everything you need is within reach.

Project Management: Organizing Your Claims

The 'Projects' module is where the magic happens. Here, you'll create, manage, and organize all your claims. Xactimate X1 allows for robust project management, enabling you to group

similar claims, assign them to specific users, and track their progress. When creating a new project, pay close attention to the details you input, as this information will populate various reports and communications. Effective project organization is paramount to avoiding confusion and ensuring no claim falls through the cracks.

Navigating Within a Project: The Estimate Creation Process

Once you open a project, you'll enter the estimate creation environment. This is where you'll input details about the loss, select line items, and build your comprehensive estimate. The interface is typically divided into several key areas:

1. **The Cover Sheet:** This section holds crucial policy and claimant information, including policy numbers, adjuster details, and claimant contact information. Accuracy here is non-negotiable.
2. **The Sketch Module:** This is where you'll visually represent the damaged areas of the property. Xactimate X1 offers powerful 2D and 3D sketching tools that allow you to draw floor plans, add rooms, and meticulously detail measurements. Mastering the sketch is fundamental to accurate material and labor cost calculations.
3. **The Price List:** This is the backbone of your estimation. Xactimate X1 utilizes comprehensive, regularly updated price lists that reflect local market costs for labor, materials, and equipment. Selecting the correct price list for the geographic area of the loss is critical for an accurate estimate.

Building Your First Xactimate X1 Estimate: A Step-by-Step Approach

Let's walk through the process of creating a basic estimate in Xactimate X1. This practical approach will solidify your understanding of the interface and its functionalities.

1. Creating a New Project: Setting the Foundation

Start by navigating to the 'Projects' module and clicking 'New Project'. Fill in all the required fields meticulously. This includes claimant information, policy details, date of loss, and the cause of loss. The more detailed and accurate you are at this stage, the smoother the rest of the process will be.

2. Initiating the Sketch: Visualizing the Damage

Open your new project and navigate to the 'Sketch' module. You can either draw a new sketch from scratch or import an existing floor plan. Xactimate X1's sketching tools are incredibly

robust. Use the room tools to draw out the affected areas, adding details like doors, windows, and any structural elements. Accurately measuring and depicting the damage here is paramount for accurate material calculations.

3. Adding Line Items: Detailing the Scope of Work

With your sketch complete, it's time to add the specific tasks required to repair the damage. Navigate to the 'Line Item Browser'. You can search for specific items by keyword (e.g., "drywall repair," "painting," "flooring") or browse through categories. When you find the appropriate line item, drag and drop it into your estimate or double-click to add it.

4. Refining Line Item Details: Precision in Every Entry

Once a line item is added, click on it to open the 'Item Details' window. Here, you can adjust the quantity, specify the unit of measure (e.g., square feet, linear feet, each), and add any specific notes that clarify the scope of work. For instance, if you're estimating drywall repair, you might specify the type of drywall, the thickness, and the level of finish. This level of detail is crucial for transparency and avoiding disputes.

5. Utilizing Price Lists: Ensuring Localized Accuracy

Xactimate X1 is designed to use localized price lists. Ensure you have selected the correct price list for the geographic region where the loss occurred. This is usually done during project setup or can be adjusted within the project settings. These price lists are updated regularly by Xactimate to reflect current market conditions, ensuring your estimates are competitive and fair.

6. Reviewing and Validating Your Estimate: The Quality Check

Before finalizing, it's essential to review your estimate thoroughly. Xactimate X1 offers various reporting options that allow you to see your estimate in different formats. Check for any errors, inconsistencies, or missing line items. The software also has validation tools that can flag potential issues or missing information.
